- Initiate team discussions for future improvements
- Creating documentations in Jira Confluence
- Share knowledge with the team and provide tips

Frontend Developer

ABOUT ME

I've got around 15 years of experience as a FE developer. I'm passionate and willing to improve my skills in JavaScript and JavaScript frameworks and libraries, such as React, Angular(2+), Vue and some of the latest FE technologies, like ES6+, Node, Next, etc. I'm interested in leading and management positions as well, since I think I've got the right mindset for doing such work. I've been doing various web projects (from parallax-fancy animated websites with DOM manipulation to complex corporate financial systems). I've got around 5 years experience with more complex JavaScript. I dare to state that my soft skills are high and I don't have problems with communication, even with people with lack of communication skills. I'm motivated to create nice and helpful projects, which will satisfy the clients, as well as myself.

SKILLS (technical)

JavaScript, React, Redux/Redux Toolkit, TypeScript, NextJS, Node/Express, JSON, REST, HTML5, CSS3, Jest/React testing library, FireBase, MongoDB, GIT/GitLab, Jenkins, CMS, Jira, ClickUp

SKILLS (job-related)

- Project management
- Team leading
- Good command of quality control processes
- Bug tracking systems (Jira, ClickUp, etc.)
